

Massey Ferguson Introduces MF 6S Series for Concentrated Power and Straightforward Operation

MF 6S Series Delivers High Performance in a Wide Range of Applications

The versatile Massey Ferguson 6S Series is designed to deliver concentrated power with straightforward, user-friendly operation for high performance in a wide range of applications.

Boone, Iowa | Aug. 30, 2022 | [AGCO Corporation](#) (NYSE:AGCO), a global leader in the design, manufacture and distribution of agricultural machinery and precision ag technology, ushers in a new era of concentrated performance with the [Massey Ferguson® 6S Series](#) tractor. Massey Ferguson will showcase the MF 6S Series, along with its full S Series lineup, at booth #1002 during the [Farm Progress Show](#) in Boone, Iowa, August 30 – September 1.

The versatile MF 6S Series delivers up to 180 horsepower — the highest from a four-cylinder on the market. It pairs power with intuitive controls and advanced technology for high performance in a wide range of applications.

“Those who are born to farm know that maximizing productivity is the key to success in any ag application,” said Darren Parker, vice president of Massey Ferguson North America. “The MF 6S Series offers the power of a six-cylinder with the compact footprint and agility of a four-cylinder, giving busy producers the ideal machine to get the job done quickly and efficiently.”

Concentrated Performance for Increased Productivity

The MF 6S Series is available in four models based on horsepower — 145, 155, 165 and 180 — and features a 4.9-liter AGCO Power™ engine with a legacy of dependability and class-leading sustainability. Operators can choose from two transmission options for maximum productivity that meet their particular power requirements. The Dyna-6 transmission offers maximum fuel efficiency through 24 forward and reverse speeds up to 31 mph. The Dyna-VT™ transmission allows operators to select the exact speed without compromising engine rpm for optimal output in any situation. This transmission option is also available with a 50-gallon-per-minute load-sensing hydraulic system. With a maximum lift capacity of 21,164 pounds, outstanding towing capacity and an increased gross vehicle weight of up to 27,558 pounds, the MF 6S Series excels with heavy loads and demanding implements.

This power is concentrated in a compact footprint that gives farmers and hay producers class-leading power and torque with a 900-pound-lighter footprint than comparable six-cylinder models for minimal impact to soil. Additionally, the MF 6S Series offers silage hay and 5-foot-wide round baling operations for a high-performance operation without impacting next-cutting yield. A perfectly balanced power-to-weight ratio efficiently handles heavy hay balers while a 15-foot, 7-inch turning radius makes for superior maneuverability in the field or the feedlot.

User-Friendly Operation for Optimal Comfort and Efficiency

Straightforward usability and superior comfort complement the concentrated power of the MF 6S Series. In keeping with the overall S Series design introduced with the MF 8S Series, the cab layout uses simple color coding on all controls for quick identification and easy operation. Deluxe models also feature a new ergonomic armrest with the customizable MultiPad lever and E/H multifunction joystick for intuitive, effortless control of all major functions. The optional Datatronic™ 5 terminal features an easy-to-navigate digital dashboard that can be customized for operator preference. This cutting-edge technology makes operation quick and easy, allowing producers to change setups on hydraulics, transmission and engine from one convenient terminal for maximum efficiency in any application.

"The more a producer can achieve from the driver seat of a single machine, the more they can get done in a day," Parker said. "Our MF 6S Series allows producers to streamline operations, tackling hauling, mowing and loader work with a single, straightforward, dependable machine."

For added versatility with loading applications, the MF 6S Series is available with fully integrated loader provisions and factory-installed live third function with proportional command. The tractor boasts a lifting capacity of up to 5,070 pounds and a height of over 13 feet, making it ideal for heavy-duty applications in hay and livestock operations.
