# MAKE BETTER BALES WITH LESS GUESSWORK

## ELIMINATE THE NEED TO CONSTANTLY ADJUST TRACTOR SPEED AND SETTINGS.

Tractor Implement Management (TIM) helps take that guesswork out of the job by allowing the implement and tractor to work together automatically. By shifting control from manual adjustments to the system itself, TIM helps alleviate operator fatigue and allows operations to produce more consistent results while improving efficiency across the field.

### TIM Drive

Automatically adjusts tractor speed to match crop conditions and target bale results. TIM Drive allows the implement to influence tractor speed based on crop load and the bale you want to produce. This helps maintain consistent bale formation while reducing the need for constant operator adjustments.

### TIM Hydraulics

Automatically manages key hydraulic functions during baling, reducing the need for manual adjustments and helping maintain smooth, consistent performance as conditions change.

### Proven Results in the Field With TIM

Field trials pairing Hesston by Massey Ferguson® LB2200 Series large square baler with Massey Ferguson tractors equipped with TIM delivered measurable improvements in bale weight and density.

## TRACTOR IMPLEMENT MANAGEMENT EFFECTS ON BALE CONSISTENCY, LOW MOISTURE STRAW

	FLAKE COUNT VARIABILITY	AVG BALE WEIGHT (LB)	BALE WEIGHT DIFFERENCE (LB)	WEIGHT VARIABILITY (LB)	WEIGHT VARIABILITY (%)	LENGTH VARIABILITY (IN)	LENGTH VARIABILITY (%)
TIM	4	1005	85	59	6%	2.4	2%
No TIM	13	920	85	99	11%	3.5	3.5%

## TIM IMPROVED BALE FLAKE CONSISTENCY BY UP TO 225% AND INCREASED BALE WEIGHT BY UP TO 9%.

More uniform, denser bales help improve marketability, reduce rejected loads and lower handling, fuel and labor costs — while fewer loads mean less time and expense for hauling.
